

# D2M Center of Excellence for AI/ML

## Empowering enterprises to build a data-first organization

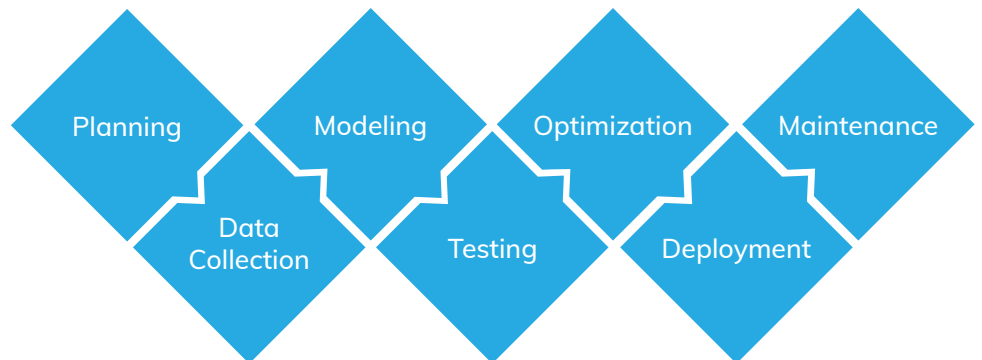

The D2M Center of Excellence (CoE) for Artificial Intelligence and Machine Learning (AI/ML) is a collection of tools, processes, and frameworks that allows organizations to jumpstart the use of AI and ML across business units. Your businesses can leverage our solution to quickly set up an AI/ML CoE and begin the journey towards becoming a true data-first organization.

The D2M CoE-in-a-Box helps your business create the appropriate case for AI/ML, select and build the right team, discover use cases for business verticals, build data pipelines and models, and build processes to support those models over the long term while at the same time helping you embrace the 'data-first' mindset.

### Our Approach

Successful ML projects require careful management and a robust operational framework. The D2M AI/ML CoE-in-a-Box provides worksheets, processes, and procedures that cover the entire ML project lifecycle from planning to ongoing maintenance.

### Why D2M?

Organizations can jumpstart their machine learning practice using D2M's CoE-in-a-Box solution as a framework. Specifically, they will use the solution to:

- Create a vision and roadmap for AI
- Determine the scope and objective for AI
- Build a target data architecture
- Develop a set of AI champions within the organization
- Spread success stories
- Discover, develop, and deploy ML solutions

#### About D2M

D2M (Digital & Data Managed Services) is an outcome-driven services and solutions partner serving enterprises across their IT operations and digital initiatives. We build solutions that accelerate digital transformation journeys and meet your critical business goals. Leveraging automation, we guarantee hyper-stability, enhanced efficiency, and the highest level of user satisfaction.
